

Organisation Overview:

DIATEM Networks is the leading developer of real-time service control systems for Metro Ethernet networks. DIATEM's solutions enable service providers to expand revenues by providing highly differentiated, advanced Ethernet services. DIATEM provides the industry's only solution to empower its customers to offer on-demand Ethernet services with quantifiable Class and Quality of Service attributes and stringent Service Level Agreements. Leveraging years of telecommunications research in real-time systems, bandwidth management and control and dynamic traffic modelling, DIATEM lowers operating costs by simplifying service provisioning and management and maximizing network utilization.

Technology Overview

DIATEM Networks unique technology includes state of the art bandwidth proprietary algorithms, to ensure optimum service design against SLA and network utilization criteria. This capability is especially applicable to service providers deploying Ethernet technologies given the OAMP limitation of Ethernet

Organisation Partners:

Vengrowth – Investors
National Capital Institute of Technology – provides a comprehensive, live, multi-vendor testbed for product testing and demonstrations

Partnering Needs/Opportunities:

DIATEM Networks would benefit from business and technology partnerships that would expand its international testbed for product testing and demonstration to in-country prospects, and from channel relationships to take the product to European markets

DIATEM can offer its partners an opportunity to contribute both financially and technically, to strengthen DIATEM's offering. DIATEM also seeks business partners to validate product demand in the European markets

Presenter Biography: Deryl Rasquinha

VP-Marketing & Product Management – Deryl Rasquinha – 25 years Telcom / OSS experience, with Bell Canada, and Eftia

Established: 2002

Number of Staff/Employees: 13

Industry Sector:

Telecommunications

Products/Services

Service Provisioning / Service Control
OSS for Ethernet Services
