

**Organisation Overview:**

Founded in 1995, Scienton was working on intelligent information management and specialized in risk and security modeling in 2000 using its patent Information Security Model™. Scienton is focused on holistic information risk and security modeling using intelligent technologies. The mission is to provide industry with holistic, automated and objective information risk and security modeling framework & tool.

**Technology Overview**

Scienton's visual blueprint and patented methodology the Information Security Model™, is the risk and security modeling tool that maps information security standards and legislations to real life information structure using standardized, repeatable, reliable, structured, holistic and objective approach.

**Organisation Partners:**

Currently Scienton is partner with Ajilon, BMC Software, Skybox Security, BSi, NetIQ, Itelco, Navantis. Partnerships are oriented towards risk and security management vendors on the global level.

**Partnering Needs/Opportunities:**

The new future directions in risk & security modeling, uniquely provided by Scienton, will enable Scienton partners to increase the client base, provide strategic risk & security solutions to the existing client base and develop new channels of product and service revenue; Partnering with the client will enable the client to deliver market differentiator risk and security modeling and metrics.

We are looking for the client to partner or a partner with the client to materialize our risk and security modeling software tool. The result will be the revenue generating real-time risk and audit on tap!

**Presenter Biographies: Jovan Miladinovic & Predrag Zivic**

Mr. Jovan Miladinovic has more than 20 years experience in information technology, as a technology leader, consultant and executive.
